

Seabrook Sailing Club

Seabrook, TX

The Seabrook sailing club is located approximately 30 mile away from the city of Galveston. This club, located on Galveston bay, was founded in 1934 and is a family oriented club, run and maintained entirely by its members.

In 2008, the existing two-story structure was damaged beyond repair by hurricane Ike, resulting in a need to rebuild the existing building. The two-story club house consists of an upstairs kitchen and dining area with showers and heated dressing rooms downstairs.

The new club was designed by Eco-Holdings using AutoDesk Revit Structure and Revit MEP Building Information Modeling software. The structure consists of energy-efficient structural panels and timber framing on driven pile foundations. Epoxy-coated reinforcing steel was used in all of the concrete elements.
